Seeking a career to help expand my knowledge and develop my skills in the computer science field.

Education
Bachelor of Science in Computer Science   May 2022
State University of New York Oneonta, GPA – 3.54

Related Coursework
- Data Structures
- Introduction to Databases
- Fundamentals of Programming
- Computer Languages

Work Experience
DevOps Intern, **Kraft & Kennedy**, **Wilton, CT**   May 2021-August 2021
- Worked with DevOps team of 3, to improve, maintain and create internal and client facing LAMP applications.
- Collaborated with team members using basic git commands from a dedicated development server to sync our repositories
- Managed code deployments through dev and production via AWS CloudFormation, CodeBuild, Lambda and CodeDeploy, using CodePipeline.
- Built, tested, and implemented a solution to allow clients the ability to restrict access to designated IP addresses.
- Built a custom notification mechanism utilizing AWS Lambda and SQS to parse CloudWatch logs for errors and notify developers via email periodically using SQS timeouts and SNS to further detail the cause of the problem until it was resolved. This helped reduce troubleshooting effort and time allowing us to directly go to the source of the errors.
- Created an integration between our custom API and Jira to allow other teams to monitor progress and make updates to their requests through the UI using custom fields.
- Met weekly with internal teams to discuss the progress of their requested features and presented its current state while talking through their feedback.

Marketing Assistant, **Braun Moving and Storage, Newtown**, **CT**   June 2019-March 2020
- Independently created a Python application to help decrease manual workload for direct marketing team. This application is still in use, allowing users to remotely support the marketing team, eliminating the need for multiple emails or phone calls.
- Co-managed the collection of direct customer feedback using SurveyMonkey.

Skills and Knowledge
- AWS Associate Developer Certified
- Python, Node.js, JavaScript, CSS, PHP, Java, SQL, C++, Git
- Experience using Jira

Pet Projects
- WebSpotify – Python web application using Flask to present data on music through Spotify's API.
- JadenJuggles – React application to display recorded videos of me
